

The Merton Primary School
To be the best we can be.

Computing Intent Statement

Computing is integral in modern society. On a daily basis, we interact constantly with modern computing and use it as a tool to assist us with living. Therefore, it is important that our curriculum reflects our rapidly changing world that is being transformed by technology. At The Merton, we value computing and want our children to grow up wanting to be software engineers, IT consultants, cyber security analysts, game designers or web developers. Through our computer science lessons, we strive to enable our children to use resilience, co-operation and computational thinking to further understand our world. Our Digital Literacy and Information Technology strands allow children to embrace and utilise new technology in a creative, responsible and safe way in order to become independent, competent end-users of technology. We want our pupils to have a breadth of experience and to use technology to support their learning across the curriculum. The Merton provides opportunities to deepen knowledge and develop skills suitable to operate in the 21st Century workplace and for active participants in a digital world.
